Connection Kits for the AR8000 Envelope/Card Feeder

There has been some confusion about the ordering procedures for the AR8000 and the Connection Kit. The AR8000 is shipped with one Connection Kit, which consists of a wiring harness and brackets shipped with every AR8000.

The reason that there is a separate item number (S-212AS) for the Connection Kit is so that you may order additional kits for multiple GR3750 Risographs. The AR8000 can be easily rolled away which makes it possible to have one Envelope/Card Feeder that attaches to three or four GR3750's at any particular site. In this case additional connection kits are required.

If you have additional questions please call Product Marketing at (508)739-7476.
